

# **GARAGE TUFF**

by Fusion Coatings

## ABOUT US

Fusion Coatings is a family run business which specialises in garage floor coatings. With many years of experience working on flooring solutions including domestic garage floors we found there was no dedicated coating specifically designed for the garage floor environment in the UK.

### **Garage Flooring**

We understand that the garage area of your home is becoming an extremely useful space, from parking your car, home office, gymnasium or possibly a multi usage space. We also know that the UK weather is not reliable so you may not wish to leave your possessions on the front lawn for too long.

With over a one thousand garage floor installations in the UK behind us we can honestly say we have seen every possible type of garage floor and we know how to approach and advise you to get the finish you are looking for.

### Design

We carried out substantial design and testing on various formulas to enable us to develop the best possible solutions for your garage floor, from installation to aftercare by using our range of resin products.

### Personal

We offer a totally personal service from initial enquiry through to installation and beyond and because we only supply and install our own range of products you can have the complete confidence in our guarantee.

### Nationwide

Our service is nationwide for supply and installations and in the case of installations most floors are installed in one day and ready to use that evening, allowing you to move your possessions back into your garage before the weather changes!

## GARAGETUFF MMA RESIN

Our GarageTuff MMA resin system has been specifically designed for use in the garage floor environment and by combining our products with our highly skilled installation teams we can provide the highest standard of garage floor installation.

It can completely transform your existing garage floor from a dusty, damp, dirty floor to a wonderful seamless clean decorative floor in just ONE day.

installation in action

## GARAGETUFF SYSTEM

Our GarageTuff system has unique properties to provide the most durable resin product on the market for garage flooring. During the installation process our GarageTuff Primer penetrates your existing substrate to provide a long-lasting bond, then with each subsequent coat of GarageTuff Resins which goes through the same curing process we finish with extremely durable garage floor coating.

Once you have our system installed you can enjoy all the benefits of GarageTuff whether you use the garage space to park your car, as a gymnasium, office space or may be a multiuse space.

You will find that looking after your new garage floor is so easy, due to the floor being seamless you can use a mop with our Resinclean product to keep your floor looking brand new for decades.

## PROPERTIES

PROPERTIES	FUSIONS MMA GARAGETUFF	EPOXY RESIN	FLOOR PAINT

## PROCESS INFORMATION

- Our installation team would aim to be on site for 8.30am on the day of your installation and start the preparation work.
- The team will then begin to prepare the existing substrate using dust controlled diamond grinding equipment, we do this to remove any contamination in the top of the substrate and to allow our products to adhere more efficiently to the substrate
- The next stage would be to install our GarageTuff primer this is a key element of the installation process.
- We would then look to infill any cracks with our GarageTuff crack filler, this helps bind the substrate together.
- The team can now start to install the

GarageTuff body coat, it is at this point we add the colour to your garage floor. Whilst the body coat is installed and is waiting to cure, we scatter the chosen flake colour into the system.

- After an hour, the team can then begin to sweep of the excess flake and vacuum the floor.
- We know use our specialist sanding machine to help remove any nibs from the flaked floor.
- Once the team are happy with the condition of the floor, they will then carry out the first sealcoat installation.
- Once the first coat is dry, we will run the sanding machine over the floor once more before installing the final seal coat. Usually by 5pm we are finished, and your Garage floor is ready for use.

## KEY BENEFITS OF A GARAGETUFF RESIN SYSTEM

45 Minute drying time

Specifically designed to work in the garage environment

Available in various decorative colour blends

Extremely Durable coating

Excellent Resistant to Oil. Grease and Motor vehicle spills

Excellent Resistance to Tyre Marks

10-year Guarantee

## TESTIMONIALS

“We are so delighted with our garage floor it has made such a difference to how we use the garage space.”

Mr & Mrs Pascall – Essex

“Amazing! What a transformation.”

Mr Hall - Hampshire

“The floor was so good I did not want to park my car in the garage for the first few days.”

Miss Cleverly - Yorkshire

“From my first enquiry the customer service has been outstanding well done Fusion and my garage floor is now dust free.”

Mrs Austin - Worcestershire

“Great job, team were lovely and worked extremely hard in awful weather conditions.”

Mr & Mrs Kambo - Buckinghamshire

“The garage floor is so cool, I now use this space for part gym part games room.”

Mr Packash - Manchester

## FAQs

- **Why should I use GarageTuff for my Garage floor?**

Garagetuff has been specifically designed for concrete garage floors and our sealcoat is resistant to all the nasty stains usually found on a garage floor for example oil and tyre marks. It is also extremely durable and easy to clean with all work completed in one day.

- **What makes GarageTuff resin so durable?**

Each one of our resin coats when installed heats upto 45 degrees Celsius and melts in to your existing substrate, so it becomes part of the concrete floor and not just a layer on top which in time will separate.

- **My Garage floor goes past the threshold of my garage door is this a issue?**

Garagetuff is UV stable unlike other resins that will fade and go yellow when introduced to sunlight.

- **When can you install the GarageTuff system?**

We have designed the system for the UK weather, we can install in as low as -25 degree Celsius and with our fast curing properties you can move your car or possessions back into the garage the same day out of the rain!

- **Does the product have a odour?**

Yes the product is Acrylic so has a odour but is not harmful, the product omits a odour whilst curing so 1 hour per coat.

- **Is this a Self Levelling product?**

No this product is a coating and not a self levelling system, we can advise our options when we have surveyed the garage floor.
